genuine HeliCoils®!... the quick answer to damaged threads

We have introduced a selection of genuine HeliCoil® Inserts for use in automotive and engineering workshops. These original, high quality products have a long history of demanding use especially in the aerospace and defence industries.

HeliCoil® Inserts are precision formed screw thread coils of stainless steel wire having a diamond-shaped cross section.

When they are installed into HeliCoil® tapped holes they provide permanent conventional 60° internal screw threads that will accommodate the relevant original bolt or screw.

Related products such as taps and drills for tapping are also available from Draper Tools.

See pages 378-379 for full ordering details.
